

**METHOD AND SYSTEM FOR ORGANIZING DOCUMENT
INFORMATION IN A NON-DIRECTED ARRANGEMENT OF
DOCUMENTS**

ABSTRACT OF THE DISCLOSURE

A graphical user interface that presents information about documents organized in a non-directed arrangement to the user is provided by the present invention. In an exemplary embodiment, methods and systems including a graphical user interface for browsing or searching one or more documents are provided. The graphical user interface can provide information about content of a current page, previously viewed pages and pages that can be viewed by traversing various hypertext links. The invention can be embodied in computer systems that include user input devices, processors, displays, storage and the like.
